

Wege.ae application quotation

Objective:

Develop a cross platform mobile application using react native and typescript for the website wege.ae

The mobile application should maintain the same functionalities provided on the web app.

The mobile application should use the same backend as the web application.

Requirements:

- Code Handover from the front end team working on the web app
- APIs used on the web app (*documented*)
- All necessary static assets, color palette, fonts families, logo *etc...*
- Google app store developer account (*for release*)
- Apple Store developer account (*for release*)

Timeline:

The approximate timeline to finish the development of the application is around 2 months.
This timeline includes:

- Reading, understanding and getting familiar with the existing code.
- Understanding APIs used and their functionalities and implementations.
- Code implementation and logic on the frontend.
- Mimicking the current web app design and making it more mobile friendly.
- Ensuring security principles, sanitizing user input and applying code safety.
- Testing the application.
- Ensuring compatibility for both android and ios.
- Releasing the application for the respected stores.

Pricing:

A- Working on the web app code refactor: (*This process is not included in the timeline*)

If the client chooses to request help in the process of the transition of the front end code of the web app from javascript to typescript, he will be charged for an additional 400\$.

Work hours will be flexible, and will be monitored via a task system working on kanban boards (e.g, trello, jira ...)

B- Developing the mobile application:

The total cost of the development of the cross platform mobile application (*android and ios*) during the span of the timeline mentioned above is 1000\$
